Completed on	Thursday, 17 September 2026, 8:21 AM
Time taken	3 mins 35 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time

complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>

int main()
{
    int n;
    scanf("%d", &n);

    int c = 0;
    c++;  // declaration/initialization of c

    c++;  // initialization of i

    for (int i = n / 2; i < n; i++)
    {
        c++;  // i++

        c++;  // initialization of j

        for (int j = 1; j < n; j = 2 * j)
        {
            c++;  // j++

            c++;  // initialization of k

            for (int k = 1; k < n; k = k * 2)
            {
                c++;  // k++
                c++;  // original c++
            }
        }
    }

    printf("%d", c);

    return 0;
}
```

	Input	Expected	Got	
✔	4	30	30	✔

	Input	Expected	Got	
✔	10	212	212	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
